## **Factsheet - Citation for Dr Bengt Anderberg.**

Defence science and technology cooperation between Singapore and Sweden is excellent. Today, joint research and development is undertaken over a wide range of areas. This has helped to boost Singapore's capabilities in defence science and technology. This significant level of cooperation owes much to the leadership and untiring efforts of Dr Bengt Anderberg.

Dr Bengt Anderberg was the Director-General for the Swedish Defence Research Agency (FOI) from 1994 to June 2003. As the Director-General of FOI, Dr Anderberg was first a member and later the co-chairman of the Singapore - Sweden Bilateral Research & Development Meeting.

Dr Anderberg was instrumental in establishing several important initiatives in joint research and development. Through his personal effort, Singapore and Sweden began collaboration in several important subjects, including bio-chemical defence, high power microwave protection, large-scale tests on underground ammunition storage facilities, network-based defence, energetic materials and computational modelling.

In recognition of his outstanding contributions to the strengthening of defence technology cooperation and to the fostering of closer defence ties between Singapore and Sweden, the Ministry of Defence of Singapore honours Dr Bengt Anderberg by conferring on him the Singapore Defence Technology Distinguished Fellowship.
